th history of agricultural progress from the early days of man has been the history of seeds of new crops and crop varieties brought under cultivation in the early days it was achieved through the cultivation of indigenous but useful plants and those taken through introductions later through the well known techniques of selection hybridization mutation polyploidization and plant biotechnology the scientists made available many new and better varieties however to the farmer all this scientific research would be of little value unless one gets seeds which are genetically pure high germination percentage and vigour high purity sound health etc when the farmers do not get seeds possessing these qualities the yields they obtain may not be as expected the pace of progress in seed production therefore will largely depend upon the speed with which we are able to multiply and market good quality seeds of high yielding varieties
