since its first appearance in 1941 this book has remained through various editions and reprintings the standard indeed the only modern work in english in its field this third edition completely reset includes descriptions of the newer devices which have come into use in upper atmosphere sounding electronic techniques for wind finding thunderstorm location and through the renewed interest in meteorological observations from aircraft a number of new illustrations have been added the authors have followed the pattern of the earlier editions in presenting examples found in regular weather service some attention has been given however to new techniques which though not widely in use at the present time show such promise as to deserve the students attention a general treatment of the application of radar radio direction finders and radiosondes to meteorology has been included of the previous edition the bulletin of the american meteorological society said this is the first general textbook on the subject in english for more than half a century while the book is indispensable for reference for the practising meteorologist the needs of the student are met by an adequate presentation of theoretical topics

this book describes the fundamental scientific principles underlying high quality instrumentation used for environmental

measurements it discusses a wide range of in situ sensors employed in practical environmental monitoring and in particular those used in surface based measurement systems it also considers the use of weather balloons to provide a wealth of upper atmosphere data to illustrate the technologies in use it includes many examples of real atmospheric measurements in typical and unusual circumstances with a discussion of the electronic signal conditioning data acquisition considerations and data processing principles necessary for reliable measurements this also allows the long history of atmospheric measurements to be placed in the context of the requirements of modern climate science by building the physical science appreciation of the instrumental record and looking forward to new and emerging sensor and recording technologies
